

Dolby® ED2 Encoder

Overview

The Dolby® ED2 Encoder is a Processor for encoding multichannel or immersive audio into Dolby ED2 format.

The Processor is intended for broadcast and contribution workflows where processed audio must be encoded as Dolby ED2 for delivery or downstream transmission.

Typical Applications

Typical applications include:

- Dolby ED2 encoding
- Immersive audio contribution workflows
- Broadcast delivery workflows
- Encoding of multichannel audio for downstream distribution

Included Modules

The Processor includes the following processing and measurement stages:

- Input Meter
- Dolby ED2 Encoder

The signal flow is:

Input → Input Meter → Dolby ED2 Encoder → Output
